

N° 14,740

A.D. 1895

DUPLICATE

Date of Application, 3rd Aug., 1895

Complete Specification Left, 15th Feb., 1896—Accepted, 28th Mar., 1896

PROVISIONAL SPECIFICATION.

Improved Bicycle Stand.

I, THEODOR SCHLAGINTWEIT, of 16 Regent Square, Lenzie, in the County of Dumbarton, Merchant, do hereby declare the nature of this invention (as communicated to me by Josef Pfaller, of Kempten, Bavaria, in the German Empire) to be as follows:—

- 5 The improved bicycle stand constituting this invention is composed of a vertical rod or bar secured upon or having an extended base, the rod being made telescopic and being provided with an adjustable bracket for supporting the cycle frame below and a clamp for holding it upright at its upper end.

- In using the bicycle stand the crank bracket or other part of the cycle frame is rested on the supporting bracket which is or may be fitted to slide on the vertical rod of the stand and is secured by a pinching screw or like means, whilst the clamp which is jointed at the upper end of the telescopic portion of the vertical rod is made to grasp or engage the upper cross bar or other part of the cycle frame, the telescopic rod being lengthened or shortened as required and the parts secured together by a pinching screw.

Dated this 2nd day of August 1895.

COMPLETE SPECIFICATION.

Improved Bicycle Stand.

- I, THEODOR SCHLAGINTWEIT, of 16 Regent Square, Lenzie, in the County of Dumbarton, Merchant, do hereby declare the nature of this invention and in what manner the same is to be performed, as communicated to me, to be particularly described and ascertained in and by the following statement:—

The invention is illustrated by the accompanying drawings, Figure 1 of which represents the improved stand as constructed for holding a gentleman's bicycle and Figure 2 as designed for holding a bicycle of the form used by ladies, each view showing a bicycle supported thereon.

- 30 Referring to Figure 1 the improved stand constituting this invention is composed of a vertical rod or bar A secured upon or having an extended base B, the rod A being made with a telescopic portion C and being provided with an adjustable bracket D for supporting the cycle frame below and a clamp E for holding it upright at its upper end.

- 35 In using the bicycle stand the crank bracket or other part of the cycle frame is rested on the supporting bracket D which is or may be fitted to slide on the vertical rod A of the stand and is secured by a pinching screw F or like means, whilst the clamp E which is jointed at the upper end of the telescopic portion C of the vertical rod A is made to grasp or engage the upper cross bar or other part of the cycle frame, the telescopic rod C being lengthened or shortened as required and the parts secured together by a pinching screw G.

Schlagintweit's Improved Bicycle Stand.

The lady's bicycle stand illustrated by Figure 2 is similar to that represented by Figure 1 with this exception that the telescopic portion C. of the rod A is hinged at H as shown to permit of the clamp E being fixed to the seat pillar of the bicycle.

Having now particularly described and ascertained the nature of the said invention and in what manner the same is to be performed, I declare that what I claim is—

1. A bicycle support composed of a telescopic stand A, B, and rod C having an adjustable bracket D on the part A and a clamp E jointed to the rod C substantially as described.
2. A bicycle support composed of a stand A, B, jointed rod C fitted to telescope therein, adjustable bracket D and clamp E on the rod C substantially as described.

Dated this 14th day of February 1896.
